Mirror

You are currently using <http://ftp.unicamp.br/pub/apache/>. If you encounter a problem with this mirror, please select another mirror. If all mirrors are failing, there are *backup* mirrors (at the end of the mirrors list) that should be available.

Other mirrors:

Current Release of Ant

Currently, Apache Ant 1.9.2 is the best available version, see the [release notes](#).

Note

Ant 1.9.2 was released on 12-July-2013 and may not be available on all mirrors for a few days.

Tar files may require gnu tar to extract

Tar files in the distribution contain long file names, and may require gnu tar to do the extraction.

Old Ant Releases

Older releases of Ant can be found [here](#). We highly recommend to not use those releases but upgrade to Ant's [latest](#) release.

Verify Releases

It is essential that you verify the integrity of the downloaded files using the PGP signature or the SHA1, SHA512 or MD5 checksums. The checksums are not as strong indicators as the PGP signature.

The PGP signatures can be verified using PGP or GPG. First download the [KEYS](#) as well as the `asc` signature file for the particular distribution. Make sure you get these files from the [main distribution directory](#), rather than from a mirror. Then verify the signatures using

```

$ gpgk -a KEYS
$ gpgv apache-ant-1.9.2-bin.tar.gz.asc
OR
$ gpg -ka KEYS
$ gpg apache-ant-1.9.2-bin.tar.gz.asc
OR
$ gpg --import KEYS
$ gpg --verify apache-ant-1.9.2-bin.tar.gz.asc

```
